Zeinab Khaled – Junior Back-end Developer

A Junior Backend Developer with a strong foundation in Node.js and Express, focused on building reliable and scalable server-side applications. Proficient in working with JavaScript, RESTful APIs, and MongoDB to develop robust back-end systems. Familiar with tools and technologies like Git and SQL databases. Passionate about writing clean, efficient code and continuously improving skills to contribute effectively to modern web development projects.

SKILLS

- **Experienced with:** JavaScript, Node.js, Express, MongoDB, RESTful APIs, Git, Postman, SQL, JWT, GitHub.
 - **Familiar with:** TypeScript, Docker, PostgreSQL, Firebase.
-

EDUCATION

Faculty of computer & information science, higher technological institute

2021 - 2025, Egypt,10_Ramadan GPA(3.39)

Route Academy , Back-End developer

july 2024 - december2024

Responsibilities

- Built and maintained RESTful APIs using Node.js and Express.
- Implemented JWT authentication, input validation, and error handling.
- Managed data with MongoDB and designed efficient schemas.
- Collaborated with front-end teams to integrate APIs.
- Used Git for version control and wrote clean, maintainable code

Projects

- **Brain Tumor Management System (Graduation Project)**
Built a secure Node.js and Express back-end for a medical platform focused on brain tumor awareness. Implemented email-based user verification, secure data storage with MongoDB, and JWT authentication. Developed APIs for displaying medical news, managing doctor profiles,

booking appointments, and storing patient history including MRI images and tumor types. Used express-validator for input validation and ensured strong data privacy.

- **Built a secure e-commerce back-end application using Node.js and Express.**
Implemented user authentication with email verification, secure password hashing, and login/signup functionality. Developed features including product categories and subcategories, brands, shopping cart, coupon system, order processing, and user reviews. Used MongoDB for data storage and JWT for session management, focusing on modular, scalable RESTful API design.
- **Built a Saraha-style anonymous messaging app using Node.js and Express.**
Implemented user and message models with input validation and error handling using expressvalidator and asyncHandler .Designed RESTful APIs to allow users to receive anonymous messages securely. Focused on clean code structure, validation, and smooth asynchronous request handling.
- **Developed a simple library management back-end using Node.js and Express.**
Created a RESTful API to manage a collection of books and authors, including CRUD operations for both models. Implemented data relationships to link books with their respective authors using MongoDB. Focused on clean code structure and efficient handling of database queries.
- **Built a job application management back-end using Node.js and Express.**
Designed and implemented RESTful APIs to handle job listings, user accounts, applications, and company profiles. Structured models to manage relationships between users, jobs, and companies using MongoDB. Focused on clean architecture, secure data handling.
- **Developed a basic social media back-end using Node.js and Express.**
Implemented core features including user accounts, posts, and comments with MongoDB. Designed RESTful APIs to support creating, retrieving, and managing user-generated content. Focused on clean data relationships, responsive UI, and a scalable structure for social interactions.
- **Developed a simple online learning back-end using Node.js and Express**
Built RESTful APIs to manage courses, departments, and student data, with MongoDB as the database. Structured models to link students with their enrolled courses and corresponding departments. Focused on clean API design, efficient data handling, and clear relationships between entities.
- **Created a basic gym management system using Node.js.**

Managed member and trainer data using JSON files, with functionalities for tracking statistics and handling basic operations. Focused on simple file-based storage, modular structure (member.js, trainer.js, statistics.js), and clean, organized code for small-scale gym use.
